

# Muth *Signal*® Mirrors

## Attention:

The heated *Signal Mirror*® kit is designed to fit an existing vehicle with heated mirrors. The heated kit will connect to the existing factory wiring to retain the heated mirror functions while adding the *Signal*® function.

If the vehicle is not equipped with heated mirrors, the customer will have to purchase both the heated *Signal Mirror*® kit and the H-Mod (Heated Mirrors on Demand). The H-Mod will provide the additional wiring, switch and circuitry to safely add heated *Signal*® mirrors.

Each kit consists of a left and right-hand *Signal Mirror*® assembly (mirror-glass replacement), wiring harness, and instructions, unless otherwise noted. Please read Notes section for additional information prior to purchase.

## Notes:

1. **Heated mirror applications replace factory installed heated mirrors.**
2. If the vehicle has Electro-chromic (EC or self-dimming) Exterior Mirrors, that feature will be lost with *Signal*® mirrors.
3. All retrofit kits, except 220-0019-0/H and unless otherwise noted, require factory installed power mirrors to complete installation.
4. Retrofit kit 220-0114-0/H has flat left-hand glass and convex right-hand glass.
5. NOT compatible with the 33- and 15-LED *Signal*® mirrors which are found on some Bronco, Econoline, Expedition, and F-150/250 models.
6. The Wide Angle *Signal*® Mirror is not recommended for vehicles equipped with a Multiplex wiring system or side-impact airbags. Call your local dealer if you are unsure how your vehicle is wired.
7. *Signal* may flash out of sync with vehicle's signal on some models.
8. This *Signal Mirror*® kit will retrofit a Velvac "2020 Standard" mirror with power and heat. Call 800-844-6616 if you are unsure if you have a Velvac mirror.
9. All kits use red LEDs unless otherwise noted.
