

New Fuel Pump Assembly Kit for DBW 2010 Heaters - Part Number 906073B

08/10/2000

New Fuel Pump Assembly Kit 906073B:

A new 10 bar (145 psi.) fuel pump assembly kit is now available as a replacement for all former 8 Bar (116 psi.) and 7 Bar (100 psi.) fuel pumps 42977B and 65516A as used on the DBW 2010 coolant heater.

The new fuel pump assembly kit is available under part number 906073B and includes all hardware to upgrade existing heaters to the new standard when fuel pump replacement is required. Refer to the assembly instructions included with the assembly kit.

New 0.35 gph Fuel Nozzle (Included):

Included with the assembly kit is a 0.35 gph. fuel atomizing nozzle. When upgrading earlier DBW 2010 coolant heaters with the 8 bar (116 psi.) and 7 bar (100 psi.) fuel pump, the 0.40 gph. nozzle must be replaced with the new 0.35 gph. nozzle included in the kit.

DO NOT reuse the earlier 0.40 gph. nozzle with the new 10 bar (145 psi.) pump as over fueling of the heater will occur resulting in combustion chamber and heat exchanger damage.
